

A NEW MULTI-FUNCTION OS FOR TRANSPORT

More than 10 years ago, HID Global has been a pioneer developing multi-application operating systems combining transport functionality and entrance for touristic places.

After many successful implementations of MIT™ and KIAT™ operating systems, HID Global now proposes a new OS called Soma Atlas™, combining the multi-application capabilities of KIAT™ with the advantages of the international Calypso 3.1 standard.

ADVANTAGES

- Multi-Application: the user can have access to several applications such as transport, parking, car and bike sharing, stadium access control, ePurse, loyalty, etc.
- Multi-Profile: different card's profiles can be hosted in the same card
- Multiple Systems: several different systems are hosted in one (i.e. Calypso, KIAT™, MIT™, etc), the user can go everywhere with only one card.
- Interoperable: no need to change the current system.
